

Master Nursery Tomato & Vegetable Fertilizer

Although this package looks like ordinary fertilizer, this plant food is designed to provide even growth without reducing great yields of vegetables. The 5-10-10 ratio of Nitrogen-Phosphorus-Potassium makes it a great choice for Tomatoes and Peppers. The larger amount of phosphate helps produce the highest quality and quantity of delicious vegetables. **The added Calcium aids in correcting alkalinity and water penetration, reducing the possibility of blossom end rot.** Iron, manganese and zinc aid in the formation of chlorophyll, all of which enhance the nutrition of the edible portions of the vegetables. Most other fertilizers don't supply these extra goodies that improve your success. Apply this slow release fertilizer monthly for best results.
